

Your tools. Our expertise. Real protection.

Security doesn't fail because you lack tools. It fails in the gap between detecting a threat and doing something about it. Where signal piles up, decisions slow down, and breaches happen.

Most organizations have the technology. What's missing is the operational expertise and capacity to turn what they're seeing into action—fast enough to matter. And as attacks accelerate, that gap gets harder to close on your own.

That's what Expel does. We empower defenders to close that gap through trusted security operations expertise and technology.

Expel is the leading managed detection and response (MDR) provider, trusted by more than 500 of the world's most recognizable brands to stop attackers in their tracks, minimize risk, and build security resilience. Expel's 24x7 coverage spans the widest breadth of attack surfaces with 100% transparency. Our human-led, AI-accelerated service is backed by the industry's best security practitioners, and it's built to work with the tools you already have.

Whether you need to augment your existing security program or stand up a fully dedicated SOC, Expel scales to meet your program needs on your terms.

The Expel difference

Humans + AI, working together. AI doesn't replace our analysts. It makes them faster, smarter, and more effective. Ruxie™, Expel's AI and automation engine, handles tier 1 automation so human analysts can focus on the investigations that matter. The result: a median time to detect (MTTD) of 2.41 minutes, and a mean time to remediate (MTTR) of 14 minutes on fully automated high and critical incidents—outcomes typically unheard of in security operations.

Fast deployment, flexible coverage. Most MDR providers take months to stand up. Expel deploys in hours via direct API integrations with no agents to deploy and no forced tool swaps. Security that adapts to your timeline and your stack, not the other way around.

Direct access to analysts who know what they're doing. You get direct access to experienced SOC analysts who operate as a true extension of your team, understand your environment, and communicate clearly when it counts.

Transparency as a feature, not an afterthought. Expel Workbench™, our SecOps platform, gives you full visibility into every investigation, in real time. Review analyst logic, ask questions, and watch what we do as we do it. No black box security. No sanitized updates. Just complete visibility into your own environment.

Coverage across your entire attack surface

Expel provides comprehensive coverage across your most critical attack surfaces with 160+ technology integrations, including: Endpoint & network, cloud control plane, CNAPP, identity, SaaS applications, operational technology environments, email, and SIEM.

Why Expel. Why now.

Industry recognition

The analysts who evaluate security vendors have consistently reached the same conclusion: Expel delivers.

Forrester Wave™ Leader in three consecutive reports: Expel has been named a Leader in The Forrester Wave™: Managed Detection and Response Services, Q1 2025. Expel received a perfect five-out-of-five score in 15 of 21 evaluated criteria, including cloud detection, identity detection, and integrations.

IDC MarketScape Leader in Worldwide Emerging MDR Services, 2024: IDC recognized Expel for its AI-driven approach, transparency, and rapid alert triage, highlighting Ruxie and multilayered automation as strengths. The report urges organizations of all sizes to consider Expel when evaluating MDR.

Representative vendor in the Gartner® Market Guide for Managed Detection and Response 2025: Gartner has consistently highlighted Expel as a representative MDR vendor in the last three editions of the Gartner Market Guide for Managed Detections and Response.

The Forrester Wave™ Managed Detection and Response Services, Q1 2025

Expel is the leading MDR provider trusted by 500+ of the world's most recognizable brands. 24x7 security monitoring. 160+ integrations. 100% transparency.

Security that works the way you do

Most MDR providers make promises that sound good in a sales deck and fall apart in production. Expel is built differently, and the philosophy behind the service reflects that.

We work with your stack. No rip-and-replace. No preferred vendor lock-in. Expel integrates via API with the tools you already own and gets you value in hours, not weeks.

We don't disappear after the contract is signed. Trust is earned by doing the work, investigation after investigation, incident after incident.

We know AI makes analysts better, not obsolete. AI and automation handle the volume. Humans handle the judgment. You get both.

We believe transparency is non-negotiable. You should be able to see every step of every investigation in your own environment. With Workbench, you can.

Trusted by leaders

"Expel was the only vendor we evaluated that wrote its own meaningful cloud detections...Every other vendor we met with said they could manage our cloud alerts, but Expel was the only one that could back up its claims."

Brian Center
Director of Network and Security

"Expel's platform has significantly streamlined our security operations. Expel's AI-driven triage system effectively prioritizes alerts, allowing our analysts to focus on the most critical issues. This has greatly improved our overall operational efficiency."

Ragesh Menon
Senior Director of Security Architecture
